0.1 Foreword 1
0.2 About the person 1
0.3 Introduction 3

1 From Gas Clouds to Stars **9**
1.1 The formation of the celestial bodies 9
1.2 What keeps the earth together? 9
1.2.1 Free fall video 10
1.2.2 Method video analysis 10
1.2.3 Free fall physical law 14
1.2.4 Difference method 15
1.2.5 Method: derivative 18
1.3 What keeps the moon at earth? 20
1.3.1 Verification method 21
1.4 What does the air keep at earth? 23
1.4.1 Potential energy 23
1.4.2 Method: Sum and integral 24
1.4.3 Calculation of potential energy 24
1.4.4 Kinetic energy of a gas 25
1.4.5 Ideal gas law 26
1.4.6 Thermal energy of a gas 30
1.4.7 Thermal and potential energy 31
1.5 How did the sun and earth come about? 31
1.5.1 Method: analysis of gravitational instability 32

2 Stars Form Waves of Matter **37**
2.1 The evolution of the stars 37
2.2 Until when does the sun shine? 37
2.2.1 Fusion of hydrogen 37
2.2.2 Converting mass into energy 38
2.2.3 Power of the sun 39
2.2.4 Red giant 40
2.3 Light and matter 41

2.3.1 Method: Differential equation 41
2.3.2 Waves 44
2.3.3 Does light have a wavelength? 47
2.3.4 Has light a certain energy? 50
2.3.5 Does a photon have a certain momentum? 52
2.3.6 Quantum objects 53
2.3.7 Diffraction at the slit 53
2.3.8 Wave packets 56
2.3.9 Method: Expectation values: rolling the dice 57
2.3.10 Method: Standard deviation 58
2.3.11 Position and moment for the wave packet 59
2.3.12 Relation of the uncertainties 60
2.3.13 Gaussian function as a wave function 61
2.3.14 Matter waves 62
2.4 What will happen to the sun? 66
2.4.1 Matter waves in metal 66
2.4.2 Electron waves in a star 71
2.4.3 Gravitational instability in the white dwarf 72
2.5 Does the sun become a neutron star? 75

3 Stars Change Spacetime **77**
3.1 How does a black hole arise? 77
3.1.1 Cygnus X-1 with a black hole 77
3.1.2 Event horizon in Cygnus X-1 78
3.1.3 Event horizon at the core of the galaxy M87 79
3.2 Findings from the SRT 80
3.2.1 Constancy of the velocity of light 81
3.2.2 Light clocks 82
3.2.3 Own mass and relativistic mass 84
3.2.4 Relativistic energy 86
3.3 Findings from the ART 88
3.3.1 How does a black hole change space? 88
3.3.2 Elongation 88
3.3.3 Elongation determined via regression 90
3.3.4 Energy in the gravitational field of a mass 92
3.3.5 Elongation derived via DEQ 94
3.4 Temperature of a black hole 99
3.4.1 Basic idea for estimating the temperature 101
3.4.2 Basic idea for energy conversion 102
3.4.3 Unused Energy 102
3.4.4 Estimating the temperature 103
3.5 How does space create a double image? 104

4 Horizons in spacetime **107**
4.1 Light-travel distance . . . 107
4.2 Horizons: Limits of Visibility . . . 109
4.2.1 Horizon on the ground . . . 109
4.2.2 Schwarzschild radius: an event horizon . . . 110
4.2.3 Light horizon . . . 110
4.2.4 Uncertainty: limit of visibility . . . 116
4.3 Combined Limit of Observation . . . 116
4.3.1 Planck density . . . 119
4.3.2 Memberless objects . . . 120
4.3.3 Special radii at scaled densities $\tilde{\rho}$ and $D = 3$ . . . 121
4.4 Binary fluid . . . 122
4.4.1 Possible objects in the early universe . . . 123
4.4.2 Stability of black holes in an environment of photons in $D = 3$ . . . 124
4.4.3 Heat radiation in D dimensions . . . 129
4.4.4 Hawking radiation in D dimensions . . . 135
4.4.5 Incoming radiation in D dimensions . . . 136
4.4.6 Sufficient stability condition in D dimensions . . . 137
4.4.7 Existence of black holes in the early universe . . . 138
4.5 Pair of adjacent objects in the fluid . . . 145
4.5.1 Surroundings exhibit no gravity on the pair . . . 146
4.5.2 Mass or dynamical mass M_j . . . 146
4.6 Energy of one object of the pair . . . 148
4.6.1 DEQ for the position factor ϵ . . . 149
4.6.2 Solution of the DEQ for ϵ . . . 151
4.6.3 Identification of $\epsilon_{j,slow}$ . . . 156
4.6.4 Excess energy term . . . 156
4.6.5 Invariant energies . . . 158
4.7 Expansion of space caused by motion . . . 159
4.7.1 Average over many pairs . . . 160
4.7.2 Uniform scaling caused by motion . . . 160
4.7.3 DEQ for uniform scaling . . . 162
4.7.4 Friedmann - Lemaître equation, FLE . . . 164
4.7.5 Mapping of averaged DEQ to FLE . . . 164
4.8 Motion of objects m_j causes flatness . . . 165
4.9 Expansion conserves energy . . . 167
4.9.1 Energy of a mass . . . 167
4.9.2 Dark energy . . . 167
4.9.3 Energy of the curvature of space . . . 168
4.9.4 Energy of radiation . . . 168
4.10 Additional results via microscopic DEQ . . . 170

4.10.1 Anisotropy 170
4.10.2 Solution of the singularity problem 170
4.11 FLE with P and without k 171
4.12 Expansion of space 172
4.12.1 Redshift 172
4.12.2 Observation 173
4.12.3 Interpretation 173

5 Macrodynamics of spacetime 175
5.1 Equation of motion for mean values 175
5.2 Solutions of the FLE 176
5.2.1 Method: structural identity 176
5.2.2 Method: Differential equation 178
5.2.3 Discovery of dark energy 180
5.2.4 Dynamics with dark energy, only 181
5.2.5 Overall dynamics without quantization 183
5.2.6 Limits of dynamics without quantization 185

6 Microdynamics of spacetime 191
6.1 Dynamics with quantization 191
6.2 Methods for quantum physics 192
6.2.1 Method: Properties of wave functions 192
6.2.2 Method: Operators in the energy term 199
6.2.3 Method: Photons in free space 200
6.3 DEQ for the wave function $\Psi_j(\vec{r}_j)$ 200
6.3.1 Observation of higher dimensions 202
6.3.2 $D > 3$ due to gravitational instability 202
6.4 Energy terms at higher dimension $D \geq 3$ 204
6.4.1 Momentum term for $D \geq 3$ 204
6.4.2 Gravity term for $D \geq 3$ 205
6.4.3 Special radii at scaled densities $\tilde{\rho}_D$ 206
6.4.4 Quantized FLE for pairs 208
6.4.5 Quantized FLE 210
6.4.6 Method: ground state 211
6.4.7 Method: Minimize energy via $\Delta\tilde{r}_j$ 215
6.5 Minimal energy of adjacent objects 216
6.5.1 Minimal energy in case (bb) 218
6.5.2 Minimal energy in case (bp) 218
6.5.3 Minimal energy in case (pb) 219
6.5.4 Minimal energy in case (pp) 220
6.5.5 Bose gas in case (pp) 221
6.5.6 Minimal energy in all cases 226

6.6 Minimize energy via D 228
6.6.1 Dimension depending on the density 229
6.6.2 Method: Distance enlargement factor 230
6.6.3 From the light horizon to the dimensional horizon . . 231
6.6.4 Explanation of the rapid enlargement in distance . . 233
6.6.5 Discussion of the hypothetical 'cosmic inflation' . . . 235
6.7 Evolution of time 236
6.7.1 Dynamics within a dimension 236
6.7.2 Dynamics at the dimensional transition 240
6.7.3 Calculation of the entire dynamics 241
6.8 Origin of the energy 242
6.8.1 Very elementary explanation 247
6.8.2 Elementary explanation 247
6.8.3 Another elementary explanation 247
6.8.4 ZPE is transformed to available energy 248

7 Discussion **249**
7.1 Method: Explanation 249
7.2 Predictions of quantum gravity 250
7.3 Quantum gravity solves problems 250
7.4 What we achieve on our own 251
7.4.1 Basic dynamics 252
7.4.2 Quantum gravity 252
7.5 Outlook 253
7.6 Appendix 253
7.6.1 Natural units 253
7.6.2 Glossary 254
