

Contents

1 Basic Concepts	1
1.1 Introduction	1
1.1.1 Four great concepts	1
1.1.2 Interesting problems	2
1.1.3 Unification	3
1.1.4 Aims and organization of the book	3
1.2 Physical constants	6
1.3 Essential cosmological parameters	9
1.3.1 Concept of the Hubble constant H_0	10
1.3.2 Dynamics via the Hubble parameter $H(t)$	10
1.3.3 On the observation of the Hubble constant H_0	11
1.3.4 Density ρ in the DEQ corresponding to $H(t)$	12
1.3.5 Age of the universe t_0	15
1.3.6 Comoving distance r_{co}	16
1.3.7 Luminosity distance d_L	17
1.3.8 Microscopically based cosmological dynamics	18
1.3.9 Dynamically essential types of densities	19
1.3.10 Dynamically essential cosmological parameters	19
1.4 Constituents of Ω_r	21
1.5 Standard model of elementary particles	22
1.5.1 β -decay	22
1.5.2 Isospin - pairs	22
1.5.3 Isospin - symmetry	23
1.5.4 Generations	23
1.5.5 Two additional symmetries	25
1.5.6 Mixing	25
1.5.7 Gauge theory	26
1.5.8 Open question: formation of mass	26
2 Quantum Gravity	27
2.1 Shortest observable standard deviation	27
2.1.1 Observable objects	27

2.1.2	Quantum condition	28
2.1.3	Gravitational condition	29
2.1.4	Uncertainty Δx of a quantum state	29
2.1.5	Lower bound of Δx in terms of E_x	30
2.1.6	Located object in D dimensions	31
2.1.7	R_S of a located object	32
2.1.8	Combination of the two lower bounds	34
2.1.9	Upper bound for the density	36
2.1.10	On the measurement of a standard deviation	39
2.2	Incompleteness of GRT	39
2.2.1	Singularity problem	39
3	Transitions in the early universe	43
3.1	Kinetic energy in D dimensions	43
3.2	Gravity in $D \geq 3$ dimensions	43
3.2.1	Gravity term for $D \geq 3$	44
3.2.2	Special radii at scaled densities $\tilde{\rho}_D$	45
3.3	Critical density $\rho_{cr.sc.}$ for shortcuts	47
3.4	Dimensional phase transitions in a binary fluid	50
3.4.1	Quantized FLE for pairs	51
3.4.2	Quantized FLE	54
3.4.3	Condensation: Ground state	55
3.4.4	Minimization of reduced energy via $\Delta\tilde{r}_j$	58
3.4.5	Minimization of reduced energy via D	60
3.5	Connections: sequence of $\tilde{\rho}_{D,cr,conn.}$	64
3.6	Dimensional transitions in a Bose gas	67
3.7	Dimensional horizon $D_{horizon}$	68
3.8	Coexistence of phases	70
3.9	Expansion and Enlargement via FLE in D dimensions	73
3.10	Transition of a ZPO	73
4	Derivation of Ω_γ	75
4.1	Time reference: Hubble time	75
4.2	Is heterogeneity essential for Ω_r ?	76
4.3	Concept of the calculation of Ω_γ	78
4.3.1	Explicitly determined quantities	78
4.3.2	Implicit determination with a function	79
4.3.3	Fixed point of $\Omega_{\gamma,test}(\Omega_{\gamma,hypo})$	80
4.3.4	Density of curvature parameter	80
4.3.5	Used result of the Planck scale	81
4.3.6	Used result of neutrino physics	81
4.3.7	Used result <i>ERS</i>	83

4.4	Fixed point $\Omega_{\gamma, \text{fixed point}}$	83
4.5	Comparison with observation: Ω_γ	84
4.5.1	Time evolution of the photons ρ_γ	85
5	Quanta of Spacetime	87
5.1	On tensors in spacetime	87
5.1.1	Deformations	87
5.1.2	Linear change of the volume	89
5.2	On fields of spacetime	90
5.3	Propagation of waves of spacetime	90
5.4	An example: gravitational waves	91
5.4.1	Geometric description	92
5.4.2	Elementary deformations	92
5.4.3	Linear combinations of deformations	94
5.4.4	Elementary zero-trace deformations	95
5.4.5	Unidirectional gravitational waves	96
6	Time Evolution of Dark Energy	97
6.1	Polarization modes of these QST	97
6.2	Time evolution of these QST	98
6.3	Comparison with observation: ρ_Λ	99
7	Excitation of the Vacuum	101
7.1	Components of the present-day vacuum	101
7.2	Basic solution of the hierarchy problem	103
7.3	Spectrum of excitation of the vacuum	107
7.3.1	Cosmic folding of ZPOs	107
7.3.2	On composed excitations	108
7.3.3	Transitions of ZPOs	109
7.3.4	Excitation by ladder operators	110
7.3.5	Combined excitation	110
7.4	Formation of mass	111
7.5	Superposition of QST	113
7.6	Formation of objects in $D \geq 3$ dimensions	113
7.7	Formation of a fermion at $D = 3$	114
7.8	Formation of a boson at $D = 3$	115
8	Formation of Neutrinos and Ω_ν	117
8.1	Derivation of neutrinos from QST	117
8.1.1	Dimension of QST of neutrinos	117
8.1.2	Polarization of the QST of neutrinos	118
8.1.3	Eigenvalues n of the number operator	118

8.2	Derivation of Ω_ν	119
8.2.1	Derivation of $\Omega_{\nu,n=0}$	119
8.2.2	Derivation of $\Omega_{\nu,n=1}$, $\Omega_{\nu,n=1}$ and Ω_ν	120
8.3	Comparison with observation: Ω_ν	121
9	Formation of the Higgs Boson	123
9.1	Derivation of the Higgs boson from QST	123
9.1.1	Dimension of QST of the Higgs boson	124
9.1.2	Polarization of the QST of the Higgs boson	125
9.1.3	Eigenvalues n of QST of the Higgs boson	125
9.2	Comparison with observation: m_{Higgs}	127
9.3	Masses caused by $m_{H,\text{theo}}$	127
9.3.1	Higgs field	129
9.3.2	Boson masses caused by $m_{H,\text{theo}}$	131
9.3.3	Fermion masses caused by $m_{H,\text{theo}}$	132
9.4	Effective interaction	134
10	Derivation of Ω_Λ	139
10.1	Polychromatic vacuum: derivation	139
10.2	Polychromatic vacuum: analysis	141
10.2.1	Derivation of $D_{hori}(t_{form})$	141
10.3	Fixed point procedure	143
10.4	Fixed point $\Omega_{\Lambda,\text{fixed point}}$	144
11	Derivation of σ_8	147
11.1	Comparison with observation: σ_8	149
12	Simultaneous Derivation of Ω_j	151
12.1	Dimensional horizon	152
12.2	Derivation of Ω_ν	153
12.3	Derivation of Ω_r	154
12.4	Derivation of Ω_Λ	154
13	Solution of H_0 and σ_8 tensions	157
13.1	Explanation of the H_0 tension	157
13.1.1	H_0 in the standard model	157
13.1.2	H_0 described as an average	157
13.1.3	Reference value for H_0	159
13.1.4	Reference value for Ω_Λ	160
13.1.5	Calculation of $H_0(t_e)$	161
13.2	Explanation of the σ_8 tension	161

14 Discussion	165
14.1 Comparison with observation	167
14.1.1 Condition of derivation	167
14.1.2 Cosmological and density parameters	167
14.1.3 Masses	168
14.2 Predictions	169
14.2.1 Observation of dimensional phase transition?	169
14.3 Solved problems	171
14.4 Discussion	172
14.5 Outlook	173
14.6 Unification of SMC and SMEP	175
14.6.1 Public documentation and discussion	175
14.6.2 An essential insight by quantum gravity	176
15 Appendix	177
15.1 Universal constants	177
15.2 Observed values	178
15.3 Natural units	179
15.4 Glossary	180

Hans-Otto Carmesin

Cosmological and Elementary Particles Explained by Quantum Gravity

2021 / 206 Seiten / 19,95 € / ISBN 978-3-96831-018-3

Verlag Dr. Köster, Berlin / www.verlag-koester.de
