

# Contents

<b>1</b>	<b>Basic Concepts</b>	<b>1</b>
1.1	Introduction . . . . .	1
1.1.1	Five great concepts . . . . .	1
1.1.2	Interesting problems . . . . .	3
1.1.3	Unification . . . . .	5
1.1.4	Aims and organization of the book . . . . .	5
1.2	Standard model of elementary particles . . . . .	8
1.2.1	$\beta$ -decay . . . . .	8
1.2.2	Isospin - pairs . . . . .	9
1.2.3	Isospin - symmetry . . . . .	9
1.2.4	Generations . . . . .	10
1.2.5	Two additional symmetries . . . . .	11
1.2.6	Mixing . . . . .	11
1.2.7	Gauge theory . . . . .	12
1.2.8	Open question: formation of charge . . . . .	12
<b>2</b>	<b>Quantization of Gravity</b>	<b>13</b>
2.1	Results based on QST . . . . .	13
2.2	Smallest length achieved by QST . . . . .	14
2.2.1	Smallest observable length . . . . .	14
2.2.2	Highest possible density . . . . .	16
2.2.3	Planck scale . . . . .	17
2.2.4	Curvature and GR are mesoscopic concepts . . . . .	18
2.2.5	QST range from $L_P$ towards $R_{th}$ . . . . .	18
2.3	QST unify concepts in Hilbert space . . . . .	19
2.3.1	Why GR fails to reach the Planck scale . . . . .	21
2.3.2	Why QST reach the Planck scale . . . . .	22
2.4	Modes of polarization of QST . . . . .	22
2.4.1	Modes of Modifications of space . . . . .	25
2.4.2	Rate of change of a modification . . . . .	26
2.4.3	Gravity tensor . . . . .	29
2.4.4	A basic DEQ of spacetime . . . . .	29

2.4.5	Single mode . . . . .	29
2.4.6	General deformations . . . . .	30
2.4.7	From quanta to space, an example . . . . .	30
2.4.8	From additional quanta to curvature . . . . .	31
2.4.9	From energy or mass to additional quanta . . . . .	31
2.4.10	A longitudinal mode of spacetime . . . . .	32
2.4.11	The modes of spacetime . . . . .	33
2.4.12	General RGWs or states spacetime . . . . .	33
2.4.13	Quanta of spacetime . . . . .	34
2.5	QST of the vacuum . . . . .	34
2.5.1	QST of the present-day vacuum . . . . .	35
2.5.2	Time evolution of the vacuum . . . . .	35
2.5.3	Excitation states of the present-day vacuum . . . . .	36
2.6	QST form elementary particles . . . . .	37
2.7	QST explain the Hubble tension . . . . .	38
2.8	QST explain cosmological parameters . . . . .	38
<b>3</b>	<b>QST Form Electric Charge</b>	<b>41</b>
3.1	Derivation of the electric field constant . . . . .	41
3.2	QST form charges within particles . . . . .	42
3.3	Circular frequencies of the constituents . . . . .	43
3.4	Formation of a local mass . . . . .	44
3.5	Separation of parallel component . . . . .	45
3.5.1	Components of the momenta . . . . .	45
3.5.2	Components of the wave functions . . . . .	45
3.5.3	Wave function $\Psi_j$ after the binding . . . . .	46
3.5.4	Condition of the binding . . . . .	46
3.5.5	Wave function $\Psi$ after the binding . . . . .	49
3.6	Oscillation of orthogonal component . . . . .	49
3.7	Forced oscillation . . . . .	51
3.7.1	Homogeneous DEQ of an elongation . . . . .	51
3.7.2	Inhomogeneous DEQ of an elongation . . . . .	52
3.7.3	Amplitude of the forced oscillation . . . . .	52
3.8	Transverse effective field . . . . .	54
3.8.1	Quanta of spacetime forming the field . . . . .	54
3.8.2	Principle of equal amplitudes . . . . .	55
3.8.3	Field $\hat{G}_{\alpha,j \rightarrow i}^*$ generated by transverse QST . . . . .	56
3.9	Process of emission . . . . .	58
3.10	Emission and Absorption of quanta . . . . .	60
3.10.1	Gravity and signs . . . . .	61
3.11	Interaction caused by $G_{emitted,\perp}^*$ . . . . .	62
3.11.1	Elementary charge in Planck units . . . . .	62

3.11.2	Comparison of $\kappa_{emitted,\perp}$ with elementary charge . . .	62
3.11.3	Gravitational field $\tilde{G}_{m_c}^*$ . . . . .	63
3.11.4	Emitted transverse field $\tilde{G}_{emitted,\perp}^*$ . . . . .	63
3.11.5	Electric field $\tilde{\mathcal{E}}$ in Planck units . . . . .	64
3.11.6	Comparison of the fields $\tilde{G}_{emitted,\perp}^*$ and $\tilde{E}^*$ . . . . .	64
3.11.7	Derivation in SI-units . . . . .	66
3.11.8	Interpretation . . . . .	69
<b>4</b>	<b>Symmetries of Electric Charge</b>	<b>73</b>
4.1	$\frac{1}{r^2}$ law . . . . .	73
4.2	Time inversion T . . . . .	73
4.3	Formation of negative charge $q = -e$ . . . . .	74
4.4	CT invariance . . . . .	74
4.5	Isotropy of the field . . . . .	75
4.6	Invariant mass $\tilde{m}_c = 1$ . . . . .	75
4.6.1	Conditions of the process of binding . . . . .	75
4.6.2	Process of falling towards another . . . . .	77
4.7	Universality of the elementary charge . . . . .	80
4.8	Conservation of charge . . . . .	81
4.9	Superposition of fields . . . . .	81
4.10	Energy conservation . . . . .	81
4.11	Particles with zero charge . . . . .	82
<b>5</b>	<b>From QST to Electrodynamics</b>	<b>83</b>
5.1	Basic questions . . . . .	83
5.2	From QST to classical Electrodynamics . . . . .	83
5.2.1	Classical action of a particle with a mass $m$ . . . . .	84
5.2.2	Action of a particle with a mass $m$ in SRT . . . . .	84
5.2.3	Action of a charged particle in a field . . . . .	85
5.2.4	Derivation of the matter-free Maxwell equations . . . . .	86
5.2.5	Conservation of charge . . . . .	87
5.2.6	Action of the field . . . . .	88
5.2.7	Derivation of Maxwell equations with matter . . . . .	88
5.2.8	Essential ingredients . . . . .	88
5.2.9	Essential result . . . . .	90
5.3	From QST to QED . . . . .	90
5.3.1	Propagation . . . . .	90
5.3.2	Feynman diagrams . . . . .	91
5.3.3	Perturbation theory . . . . .	91
5.3.4	From quantum gravity to QED . . . . .	92

<b>6</b>	<b>Corrections</b>	<b>93</b>
6.1	Simultaneously emitted QST . . . . .	93
6.2	Process of emission with $\kappa_{sim}$ . . . . .	95
6.2.1	Iteration for $\kappa_{emitted,\perp}$ . . . . .	97
6.2.2	Bare elementary charge . . . . .	99
6.3	Quantum electrodynamics . . . . .	101
6.3.1	Magnetic moment $\mu$ . . . . .	101
6.3.2	Derivation of $e_{theo}$ . . . . .	102
6.3.3	Iteration for $\kappa_{emitted,\perp,distant}$ . . . . .	104
6.4	Comparison with observed charges . . . . .	106
6.4.1	Deviation of electron and positron charge . . . . .	106
6.4.2	Deviation of charge conjugation . . . . .	107
6.4.3	Deviation of observation of electron mass . . . . .	107
6.4.4	Deviation of observation of electron charge . . . . .	108
6.4.5	Interpretation . . . . .	108
<b>7</b>	<b>Discussion</b>	<b>111</b>
7.1	Comparison with observation . . . . .	114
7.1.1	Condition of derivation . . . . .	114
7.1.2	Cosmological and density parameters . . . . .	114
7.1.3	Masses and the elementary charge . . . . .	115
7.2	Predictions . . . . .	116
7.2.1	Observation of dimensional phase transition? . . . . .	117
7.2.2	Deviation of the field of an elementary particle . . . . .	117
7.2.3	Bare elementary charge . . . . .	117
7.2.4	No magnetic monopoles . . . . .	118
7.3	Solved problems . . . . .	118
7.4	Interpretation . . . . .	120
7.4.1	Basic physical structures . . . . .	120
7.4.2	Basics of space, time, particles and interactions . . . . .	121
7.4.2.1	Quantum field theories . . . . .	121
7.4.2.2	The present new theory of quantum gravity . . . . .	122
7.4.2.3	Field $\vec{G}_{\perp}^*$ corresponding to $q = e/3$ . . . . .	122
7.4.2.4	Outlook . . . . .	124
7.5	Unification of SMC and SMEP . . . . .	125
7.5.1	Public documentation and discussion . . . . .	125
7.5.2	An essential insight by quantum gravity . . . . .	126
<b>8</b>	<b>Appendix</b>	<b>127</b>
8.1	Universal constants . . . . .	127
8.2	Observed values . . . . .	128
8.3	Natural units . . . . .	129

*CONTENTS*

vii

8.4	Fields and scaled fields . . . . .	130
8.5	Glossary . . . . .	130
8.6	Program . . . . .	135

Hans-Otto Carmesin  
The Elementary Charge Explained by Quantum Gravity  
2021 / 154 Seiten / 19,95 € / ISBN 978-3-96831-023-7  
Verlag Dr. Köster, Berlin / [www.verlag-koester.de](http://www.verlag-koester.de)
