

## Table of Contents

Acknowledgments	i
Summary	ii
Zusammenfassung	iv
List of tables	x
List of figures	xii
List of abbreviations	xiii
1. General introduction	1
1.1. Background	1
1.2. Cattle production systems in dry tropical regions	3
1.3. Digestive and metabolic responses to undernutrition	4
1.3.1. Interdependency of digesta passage, digestibility, and CH <sub>4</sub> emission at above maintenance levels	4
1.3.2. Effect of diet characteristics on digestibility and CH <sub>4</sub> emission at above maintenance levels	7
1.3.3. Effect of diet characteristic on fecal nutrient and microbial compositions	10
1.3.4. Physiological adaptations of ruminants to undernutrition	11
1.3.5. Undernutrition effects on feed digestibility and digesta passage	14
1.4. Supplementation strategies to overcome undernutrition	15
1.5. Study objectives and thesis structure	20
2. Digesta passage and nutrient digestibility in Boran steers at low feed intake levels	22
2.1. Introduction	22
2.2. Materials and Methods	23
2.2.1. Experimental design and animals	24
2.2.2. Feeding	24
2.2.3. Determination of digestibility and digesta passage	25
2.2.4. Chemical analysis of samples	28
2.2.5. Data analysis	29
2.3. Results	30
2.3.1. Feed and nutrient intake, digestibility and LW change	30
2.3.2. Digesta passage	35
2.4. Discussion	35
2.4.1. Feed intake and diet composition	35
2.4.2. Digesta passage and diet digestibility	36
2.4.3. Daily LW changes and maintenance energy requirements	41
2.5. Conclusions	42

3. Supplementing tropical cattle for improved nutrient utilization and reduced enteric CH <sub>4</sub> emissions	43
3.1. Introduction	43
3.2. Materials and Methods	44
3.2.1. Experimental design and animals	44
3.2.2. Feeding	45
3.2.3. Quantification of feed intake, feces, and urine excretion	46
3.2.4. Determination of digesta passage	47
3.2.5. Quantification of enteric CH <sub>4</sub> emissions	48
3.2.6. Chemical analysis of samples	49
3.2.7. Data analysis	50
3.3. Results	51
3.3.1. Feed intake, ingesta composition, digestibility, and digesta passage	51
3.3.2. Nitrogen retention and duodenal microbial protein synthesis	53
3.3.3. Methane emission	53
3.4. Discussion	58
3.4.1. Effects of supplementation on feed intake, nutrient digestibility, and digesta passage	58
3.4.2. Effects of supplementation on N balance and microbial protein synthesis	59
3.4.3. Effects of supplementation on enteric CH <sub>4</sub> emission	61
3.5. Conclusions	63
4. The effect of feeding level and feed quality on fecal composition in East African cattle farming systems	64
4.1. Introduction	64
4.2. Materials and Methods	66
4.2.1. Experimental feeding and animals	66
4.2.2. Determination of feed intake and fecal excretion	67
4.2.3. Chemical analysis of samples	67
4.2.4. Data analysis	68
4.3. Results	69
4.3.1. Feed intake and digestibility	69
4.3.2. Feces quality	70
4.3.3. Microbial composition of feces	70
4.3.4. Influence of feed intake and diet quality on fecal composition	73
4.4. Discussion	76
4.4.1. Effects of diet quality and feed intake on feces quality	76
4.4.2. Effects of diet quality and feed intake on fecal microbial composition	77
4.5. Conclusions	79

5. General discussion and conclusions	81
5.1. Digestibility, digesta passage, and CH <sub>4</sub> emission at sub-maintenance intake levels	81
5.2. Effect of supplementation on nutrient intake and digestibility, N balance, microbial N flow, and CH <sub>4</sub> emissions	84
5.3. Fecal concentrations of nutrients, amino sugars, and microbial C	86
5.4. Testing the initial hypotheses	87
5.5. Conclusions	88
References	90
Appendix	107
Related Publications	111
Curriculum Vitae	113
